

Jui-Ping, SHEN

Chris Shen | (+886) 909-630-038 | chrisshen1106@gmail.com

National Taiwan University (NTU) | Information Management

National Cheng Kung University (NCKU) | Economics

National Cheng Kung University (NCKU) | Industrial & Information Management (Minor)

BAEIR-LAB (Business Analysis & Economics Impact Research Lab)

Information

- Expected Graduated : June 30, 2027
- Gender : Male
- Web-Link : [Profile Link](#)
- GPA : 4.1 (9 / 59)
- Languages : C / C++ / Python

Licences

- TOEIC 870 (Golden Licence)
- NVIDIA DeepLearning Workshop

Academic Transcript

- Statistic & Deep Learning (A+)
- Cloud Native Development (A+)
- Software Project Management (A+)
- Commercial Programming (A+)
- Production & Operations (A+)
- Game Programming (A+)
- WebAPP Development (A+)
- Machine Learning Intro. (A)
- Artificial Intelligence Intro. (A)
- Discrete Mathematics (A)
- Software Development Method (A-)
- Data structure (A-)
- Quality Management (A-)
- Operation Research (A-)

Activities

- **(2023) PR-Director**
(NCKU-Econ Student Assoc.)
- **(2024) Head-Organizer**
(NCKU-Economics Camp)
- **(2024) PR-Manager**
(NCKU-Bike Festival-Econ)
- **(2024) Director**
(NCKU-Bike Festival-Econ)

Work Experience

- **Industrial-Acadamia Project**
(2025) Recommender Systems
- **Teaching Assistant**
(2026) Intro to Computer Science
- **TSMC Summer Intern**
(2026) TSMC ICSD

TSMC – Infrastructure Communication Service Division (ICSD)

Infra Service Engineering Department (ISED)

Developed an automated data generation system using n8n workflows for internal data processing. Also built an internal system for querying department and personal infrastructure information.

Project - Technical System Design

Software Development Method: Intelligent Invoice Management & Reconciliation System

Developed an intelligent scanning system to help companies build three-way reconciliation across purchase orders, receiving documents, and invoices.

Cloud Native Development: Asset Management System

Developed an internal asset management system for TSMC. Through user stories for general users and asset management staff, the project identified pain points and improved modules including asset management, maintenance request workflows, and new asset creation.

Web APP Development: Sport Game Simulation

Built a full-stack web application for baseball season predictions using Monte Carlo simulation. Utilized Node.js and implemented predictive algorithms.

Game Design: Gravity Drift

Developed a complete game using Unity and C#, implementing game mechanics, physics systems, and user interactions.

Project - Data Mining & Analytics

Econometrics I: Traffic Accident Analysis

Used multivariate regression to analyze the correlation between recent traffic accidents and the elderly population.

Econometrics II: TSMC Impact Analysis

Using Stata, analyzed the impact of TSMC's plant opening on the labor force participation rate in Tainan.

Honors and Rewards

- **Social Data Science Exhibition**
(1-st place in department)
- **Commercial Programming Final**
(1-st place in class)
- **2024 NCKU Trivia Game**
(3-rd place school wide)
- **Top Trader Investment**
(11-th place nationally)
